

Paleoclimate Implications: Accepted Paper and 'Popular Science'

"Paleoclimate Implications for Human-Made Climate Change" has been reviewed, revised in response to the referee's suggestions, and accepted for publication in "Climate Change at the Eve of the Second Decade of the Century: Inferences from Paleoclimate and Regional Aspects: Proceedings of Milutin Milankovitch 130th Anniversary Symposium" (Eds. A. Berger, F. Mesinger and D Šijački), Springer.

This final version has also been published in [arXiv:1105.0968v3 \[physics.ao-ph\]](https://arxiv.org/abs/1105.0968v3)

A 'popular science' summary of the paper, intended for lay audience, is available.

Thanks especially to reviewer Dana Royer for helpful comments, foundations and NASA program managers for research support, and a number of people for comments on an early draft of the paper, as delineated in the acknowledgements.

Jim Hansen
